

CLINICAL MEDICAL GUIDELINES:

1. Hypertension (High Blood Pressure): Standard treatment includes ACE inhibitors or Calcium Channel Blockers like Amlodipine. Side effects may include dizziness or ankle swelling. Patients should reduce sodium intake and monitor BP regularly.
2. Diabetes Type 2: First-line medication is Metformin. Side effects can include gastrointestinal issues. Monitor blood sugar regularly and limit simple carbohydrates.
3. Common Cold / Viral URTI: Antibiotics are ineffective against viruses. Treatment includes rest, hydration, and acetaminophen or ibuprofen for fever.
4. Asthma: Albuterol is used as a rescue inhaler for acute shortness of breath. Corticosteroids are used for long-term maintenance.
5. Peptic Ulcer Disease: Often treated with Proton Pump Inhibitors (PPIs) like Omeprazole. Patients should avoid spicy foods, alcohol, and NSAIDs.
